## Verification Dossier

Did you realise every piece of electrical equipment which is used in a Hazardous Area must accompany a Verification Dossier?

AS/NZS 60079.14 details the need for a Verification Dossier for all electrical equipment for use in Hazardous Area.

This equipment will be regularly inspected in accordance with the relevant OEM procedures, Standards and kept up to date.

Equipment EX certificates, Cable schedules, commissioning details, maintenance and inspection records are some but not all which must be recorded in the Verification Dossier.

OC Electronics can prepare your Equipment Dossier's to Australian Standards for you.

Not sure if it is relevant to you?
